Product Overview

Our factory manufactures solid oak wood sliding barn doors with a manual top-mount sliding mechanism, designed for interior and light commercial use. The defining construction feature is the K-brace - a diagonal cross-brace pattern that stiffens the door panel against warping and sagging across wide spans, which is why this profile is commonly specified for bedroom and bathroom openings. The doors are available in three standard widths: 30 x 84 in., 36 x 84 in., and 48 x 84 in. Buyers sourcing for residential projects, hospitality fit-outs, and distribution programs will find the range covers most single-opening interior applications.

What Makes This Product Different

Solid Oak Core, Not Hollow

The door is built from solid oak wood, a hardwood with a Janka hardness of 1360 lbf - dense enough to resist denting from daily contact and to hold screw and hinge points without crushing.

K-Brace Resists Warping

The diagonal K-brace layout adds cross-grain stiffness to a wide panel, reducing the seasonal movement that causes flat doors to bow or twist over time.

Three Stock Widths, 84 in. Height

30 x 84 in., 36 x 84 in., and 48 x 84 in. sizes cover standard single interior openings without custom tooling lead times.

Manual Sliding Operation

Manual top-hung sliding hardware keeps the mechanism simple, serviceable, and free of electrical components - a practical choice for wet or humid rooms such as bathrooms.

Finished Surface, Ready to Hang

Doors ship with a finished surface, so buyers avoid the sanding and sealing stage that raw timber panels require before fitting.

Specifications

Material	MDF, Solid Wood
Dimensions	30 x 84 in., 36 x 84 in., 48 x 84 in.
Closure	Manual
Door Type	Sliding Barn Door
Position	Interior
Surface Finishing	Finished

Key Performance Details

Parameter	Performance Implication	Best For
Solid oak construction	Oak's density (approximately 0.75 g/cm³) and 1360 lbf Janka rating mean the panel resists impact damage and holds fasteners securely over repeated use.	High-traffic interior openings in homes and hospitality rooms
K-brace geometry	The diagonal bracing interrupts the long grain run of a wide panel, which is the primary cause of bowing in flat slab doors.	Wide openings such as 48 in. doorways where flat panels are most prone to movement
Manual sliding closure	No motors, sensors, or wiring - fewer failure points and no electrical rough-in required at the opening.	Bathrooms, closets, and retrofit projects where power is unavailable at the header
Finished surface	The factory-applied finish removes a finishing stage from	Projects with tight handover dates or occupied-building

84 in. standard height	the job schedule and reduces on-site dust and VOC exposure. Matches common residential door height, so the door aligns with standard trim and casing without custom sizing.	renovations Residential bedroom, bathroom, and closet openings

Applications

Industry Residential interiors	Use Case Bedroom and bathroom doorways	Why This Product Fits The 30 in. and 36 in. widths match standard single-leaf openings, and the manual slide suits humid bathroom environments. The rustic oak finish and K-brace profile suit design-led interiors, while the finished surface reduces refurbishment downtime between guests. Three fixed sizes and a consistent finished surface allow distributors to hold a compact SKU range that covers most interior openings.
Hospitality and short-stay accommodation	Guest room and ensuite partitions	
Retail and distribution	Stocked barn door range for resale	

How This Product Compares

Dimension	This Product	Alternative
Core material	Solid oak wood	Hollow-core or composite panel
Panel stability	K-brace diagonal bracing	Flat slab without bracing
Surface state	Finished at factory	Raw, requires on-site finishing
Mechanism	Manual sliding	Swing or automated sliding
Size coverage	30, 36, 48 x 84 in.	Single size, custom order only

Customization Options

Size and Dimension Adjustments

Width and height can be adjusted beyond the three standard sizes to suit specific opening dimensions, subject to panel stability limits for the K-brace layout.

Surface Finish and Color

Finish tones can be matched to a supplied sample or color reference so a batch aligns with a project's existing joinery.

Logo and Branding

Branding can be applied to the door face or packaging for private-label programs, using methods suited to a finished wood surface.

Bracing Pattern

The K-brace layout can be varied in orientation or spacing to produce different visual profiles while retaining cross-grain stiffness.

Packaging & Shipping

Doors are packed for export with corner and edge protection to guard the finished face against transit scuffing, and multiple units can be consolidated per pallet to reduce handling. Flat-packed or assembled configurations are available depending on order volume and destination. Buyers should confirm the receiving height and pallet access at the destination warehouse, since 84 in. panels require adequate clearance.

Why Work With Us

Solid Wood Door Production

Our factory manufactures solid oak door panels in-house, which keeps grain selection and brace alignment under direct production control rather than relying on outside panel suppliers.

Fixed Size Range, Repeatable Output

Producing the same 30, 36, and 48 x 84 in. formats repeatedly means consistent dimensions across reorders, which matters for distributors restocking a catalogued SKU.

OEM and Private Label

Custom sizing, finish matching, and branding are handled as part of the production run, so private-label programs do not require a separate finishing step.

Technical Support After Sale

Online technical support is available for questions on sizing, bracing orientation, and finish care once the doors are in the field.
